

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

tree situated among other low trees and shrubs, and is within six or seven feet of the main driveway through the Arboretum. Across the driveway at this point is a spring and the beginnings of a small brook. In the structure of the nest are interwoven brown leaves with upturned stems, after the fashion of the Blue-winged Warblers as stated in Mr. Chapman's 'Handbook of the Birds of Eastern North America.'

A number of interesting circumstances are to be noted: first, the female has blackish areas on the throat and cheeks, shaped like those on a Golden-wing, but has also a still blacker, narrow line extending through the eye; second, a pair of Golden-winged Warblers has been known to breed in the Arboretum, in the immediate vicinity of the present nest, for a number of years; third, this year the Golden-wings seem to be absent.

Of course the most intense interest centers in the expected young, and it is to be fervently hoped that so accident will befall to prevent the successful hatching of the eggs and rearing of the young birds.—HELEN GRANGER, *Cambridge, Mass.*

Ten Birds New to the Avifauna of Kansas.—Through the kindness of my friend Dr. R. Matthews of Wichita, Kansas, I have received for the Museum of the University of Kansas a mounted adult male specimen of the Black-necked Stilt (*Himantopus mexicanus*). This specimen was shot ten miles south of Wichita in 1906 by Mr. T. H. Griffith.

Dr. Matthews has also presented to the University Museum a specimen of the Red-breasted Merganser (*Merganser serrator*), which was shot in November, 1906, by Mr. Dan Breese on his lake near Colwich, Sedgwick Co., Kansas. This species was included in the early editions of my Catalogue of the Birds of Kansas on the authority of Professor S. F. Baird, but was omitted from the fifth edition, which contained only those species which were personally known to me as occurring in Kansas.

I desire also to note the capture on the Kansas-Colorado line in the spring of 1905, by Mr. Edward R. Warren, of the eight following species new to the Kansas list: The Scaled Partridge (*Callipepla squamata*); the Spurred Towhee (*Pipilo maculatus megalonyx*); the Green-tailed Towhee (*Pipilo chlorurus*); Swainson's Vireo (*Vireo gilvus swainsoni*); Virginia's Warbler (*Helminthophila virginiae*); Macgillivray's Warbler (*Geothlypis macgillivrayi*); the Sage Thrasher (*Oroscoptes montanus*); and the Dwarf Hermit Thrush (*Hyllocichla aonalaschke*).

The above ten species, together with the seven species previously reported to 'The Auk,' in addition to the 342 species enumerated in the fifth edition of my Catalogue of the Birds of Kansas, make a total of 359 species whose actual capture in Kansas has been verified by me.—J. H. SNOW, *University of Kansas, Lawrence.*

A Kentucky Warbler near Boston, Massachusetts.—At Wellesley Hills, in the forenoon of May 14, 1907, having just left the electric car and passed in the rear of the stores and dwellings which front on the little village
